RACK PROTECTION

PROTECTION FOR RACK ENDS AND UPRIGHTS AGAINST VEHICLES

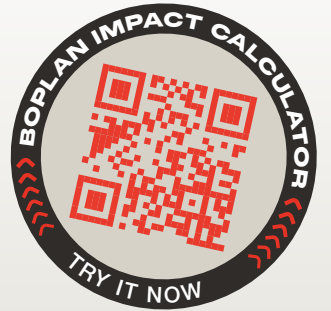

Forklift collisions with racks are among the most common workplace accidents in warehouses. Workers are often under time pressure as they drive and maneuver forklifts, pallet trucks, or stackers through tight spaces between racks. This can lead to collisions and damage. The consequences can be serious, ranging from minor property damage to collapsed racking. Prevent accidents and protect your racking with Boplan rack protection.

RACKBULL®
>>> 400 J

PROTECT YOUR RACKING AND PREVENT ACCIDENTS

Our rack protection is crafted from a highly energy-absorbing and flexible material. After a collision, the rack protection returns to its original shape, maintaining its external appearance and properties, keeping your racking intact.

RACKBULL®

400 J

UNIVERSAL RACK PROTECTION THAT FITS NEARLY ANY RACK

There is no international standard for racking dimensions. There are simply too many racking supports in too many different sizes. As the first universal rack protector on the market, RACKBULL® solves this issue. With this rack protector, you don't have to worry about the exact dimensions of your racking system. The RACKBULL® always fits.

For temperatures down to -22°F

EASY INSTALLATION WITHOUT TOOLS

OPTIMAL VISIBILITY: SIGNAL YELLOW
(OTHER COLORS AVAILABLE ON REQUEST)

RETURNS TO ITS ORIGINAL POSITION AFTER AN IMPACT

RESISTANT TO CHEMICALS AND UV RADIATION

WATERPROOF

LOW MAINTENANCE

NO PAINT OR COATING REQUIRED

EXTREMELY LONG LIFESPAN

RACKBULL® L

RACKBULL® XL

OPENINGS FOR CABLE TIES

UNIQUE, FLEXIBLE, AND COMPRESSIBLE CORE

Unlike most rack protection, the patented RACKBULL® features a flexible, compressible crumple zone. Additionally, it is not anchored to the floor. This allows the rack protection to move around the supports. This allows RACKBULL® to adapt to any rack width. The unique design further enhances its energy absorption capacity. RACKBULL® rack protection is indisputably the best collision protection system for racking.

OPTIONAL DUST COVER

This optional dust cover can be included with RACKBULL® protection to prevent dust and small debris from accumulating between the RACKBULL® and the racking. The cover also prevents accidental or intentional dropping of items into your RACKBULL®. The polymer dust cover fits snugly onto the RACKBULL® and around your racking. This fit completes the rack protection's polished appearance.

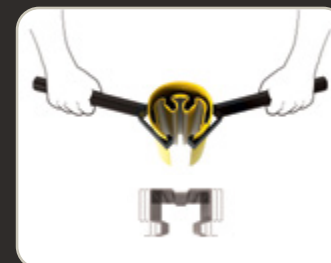

OPTIONAL FOAM PAD

For additional absorption, you can add our optional foam pad to the RACKBULL® rack protector. This pad fits seamlessly between your RACKBULL® and the rack. While the RACKBULL® is already highly shock-absorbent and durable, this optional foam padding offers extra reinforcement.

TYPICAL ENVIRONMENTS

For the protection of racking supports in:

- Warehouses and storage facilities
- Distribution centers
- Transport & logistics centers
- Logistics, supply chain, and material handling industries
- Food industry

EASY TO INSTALL

The RACKBULL® is easy to install. It takes just one click. Simply push the rack protection against the rack supports and it snaps into place. Fast, efficient, and extremely easy!

To install multiple RACKBULLS®, we recommend our optional installation kit for an even smoother process. The kit includes two metal handles that easily snap each RACKBULL® into place. This tool provides extra leverage, allowing for even quicker installing the RACKBULL® on your rack. If you are installing numerous RACKBULLS®, the kit will significantly speed up the process.

RE RACK END

SAFETY BARRIERS FOR RACK ENDS

Warehouse employees often face time pressure, making them more likely to take shortcuts. The FLEX IMPACT® RE RACK END, with its double bars and two bollards, is the best solution to protect rack ends.

- Logistics, supply chain, and material handling industries
- Food industry

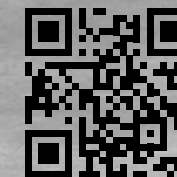

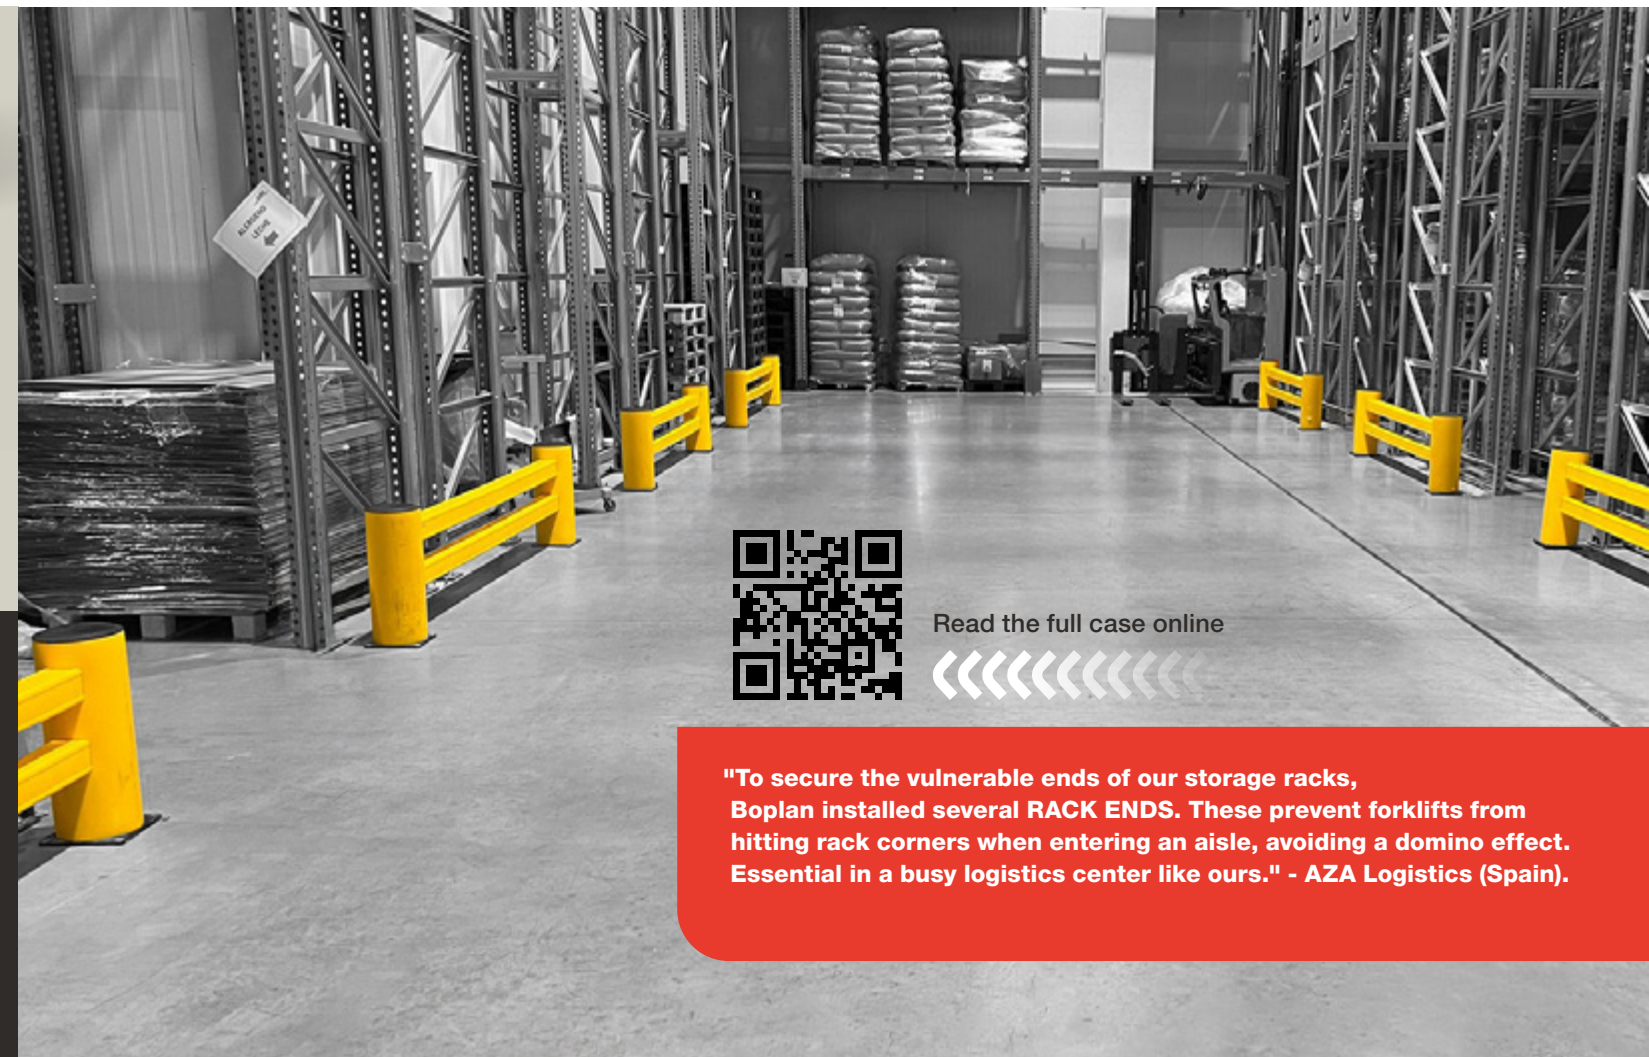

RACK END WITH SUPPORT POST

Our RACK END offer excellent protection. Need even more resistance? Then add a central support post. This post is positioned in the center of your RACK END for added stability and protection. It's especially useful for longer RACK ENDS.

OPTIONAL ROTOR

Deflects impact by rotating

Our RACK END offers excellent protection, but to maximize its effectiveness, we offer the option to slide rotors over the corner posts. If a vehicle collides with a corner post, the rotor deflects the impact by rotating away. This prevents the corner posts from absorbing the full force of the impact, reducing the risk of vehicle damage.

"To secure the vulnerable ends of our storage racks, Boplan installed several RACK ENDS. These prevent forklifts from hitting rack corners when entering an aisle, avoiding a domino effect. Essential in a busy logistics center like ours." - AZA Logistics (Spain).
